Beets Detroit Dark Red. Very crisp, tender and sweet. Uniform in color and the most desirable for canning. Delicious for salads.

Carrots Chantenay. A very fine variety. Scraped, then baked with butter and brown sugar, these are delicious. Boiled, the skins will slip, like beets.

Cucumber Clark's Special Deep Green. The result of years of selection. Averages 8 to 10 inches long, and the deep green color is very attractive. When preparing Cucumbers for the table it is not necessary to peel them. Wash, and slice, leaving the skin on; increase their attractiveness and retain all of the food value. The skin is very healthful and many people like them this way with just salt or French dressing.

Radish Early Scarlet Turnip White Tipped. A table beauty. Very crisp and tender. Makes edible size in 35 days. Flavor is delicate.

Lettuce Grand Rapids. Crisp and tender. This well known loose-leaf Lettuce will supply salads for many weeks. Wash Lettuce and squeeze out water. Make sour cream dressing of four tablespoons sugar, add enough vinegar to moisten, then add a cup of sour cream. Pour over Lettuce and watch it disappear. A sprinkling of Roquefort cheese improves the dressing.

Onion Yellow Globe Danvers. The best in the market. Good keeper, permitting you to lay away quite a supply for winter use.

String Beans Stringless Green Pod. (Jumbo package). Dwarf. Tender and productive. Boiled with lamb or pork makes a welcome change from the usual dinner.

Sweet Corn Golden Giant (Jumbo package). Ten minutes in boiling unsalted water and all the tenderness and flavor is retained. Ready to pick when color is a bright golden yellow.

Send in your favorite recipe with your order. We will publish those we have room for in our next catalog, making it more valuable to you.

YOU WILL NOTE THE DIFFERENCE

Not only in this Mail Order Catalog—the finest and most profusely illustrated that it has been our pleasure to send you—but in the Seeds, Plants, Bulbs and other items we have listed here; all carefully selected for a discriminating trade. On this statement we solicit a share of your orders.

Compare our prices with prices of big Eastern houses. See how much we can save you by buying in Denver. Our stocks are strictly high grade—good as any and better than many.

HOW TO ORDER. We ask our customers to follow these instructions and fill out order sheets carefully.

ORDER EARLY. Kindly send in your order early; in the rush season of March and April there are unavoidable delays. Late buying is trying to you and more difficult to our over-busy staff. Perishable goods are sent at a suitable planting time.

POSTAGE PREPAID. On all Vegetable and Flower Seeds, Bulbs, Plants, etc., unless otherwise stated. The U. S. Mail delivers our seeds direct to your door. For Grass, Grain and Field Seeds, also other goods that are not priced "prepaid," see Parcel Post Schedule on back of printed order blank, and on this page.

PRICES. Our prices are made on a very conservative basis. We hope you will look over our catalog carefully, comparing quality above all. ("There is hardly anything in the world that someone cannot make a little worse and sell a little cheaper, and the people who consider price only are this man's lawful prey."—John Ruskin.)

TERMS. Cash with order. Post Office Money Order, Express Order or Exchange on Denver; small amounts may be sent in clean postage stamps. Please do not ask us to ship C. O. D. unless you remit one-third of the order.

"BETTER SEEDS MAKE BETTER GARDENS."

C. R. Root

President and General Manager.

Forty-one years of experience in the Seed and Nursery business in Colorado.

ERRORS. Yes, we make them, in spite of all care. Write us at once in full that we may make the adjustment to your entire satisfaction. Keep a copy of your order and use our printed order blank. Additional order sheets sent on request.

TESTED SEEDS. We test all our seeds for purity and germination and have a large electrically heated tester approved by our State Seed Laboratory.

NON-WARRANTY. While we take all the care possible in selecting our seeds, shrubs, bulbs and plants, and we believe they will give satisfaction, we cannot guarantee them. All gardeners of experience know that success even with seeds of the quality of our **DEPENDABLE GRADE** depends largely on the weather conditions and proper cultivation, thus in common with all of the American Seed Trade Association, we, therefore, cannot guarantee the crop nor give any warranty, express or implied, as to their growth, description, quality or productiveness; and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned in the original, unbroken package and the purchase price will be refunded. If the seeds do not prove as represented by us we will replace with more or other seeds to same value.

If you have friends that would be interested in receiving a copy of our catalog, we will consider it a favor if you give us their names and addresses.

ASTERS

NEW TYPES

{ Illustrating
"Sunshine,"
a New Type. }

The queen of the summer-blooming plants. The Aster has progressed and improved by cultivation until many of the new varieties in their improved form bear a striking resemblance to the Chrysanthemum. Asters thrive in any good soil, prepared the same as for a crop of vegetables. Any extra care taken in the preparation of the soil and cultivation is repaid by larger and more beautiful flowers. They require a sunny exposure and a well enriched soil. Sow in hotbeds, pots or boxes in the house in March and April. Transplant 18 inches apart after danger of frost is past. The seed can be sown in open ground in May. Cultural leaflet on request.

Early Royal. An early, large-blooming type with elegant rounded double flowers carried on very long stems.

Deep Rose, Azure-Blue, Purple, Shell-Pink, White. Each of the above: **Pkt. 10c; ½ oz. 30c. Mixed, all colors, pkt. 10c; ½ oz. 25c.**

American Branching. Known as Vick's Branching. Our stock is grown and carefully selected at the Bodger Farm where "Asters are King." They are improved to be very large, well branched, and on long stems. For home gardens they are next in quality to the new Beauty type.

Crimson, Light Blue, White, Lavender, Purple, Deep Rose, Pink.

Each of the above: **Pkt. 10c; ½ oz. 25c.**

All Colors Mixed. **Pkt. 10c; ½ oz. 20c; ¼ oz. 35c.**

FLOWER SEEDS

The flower seeds listed in our catalog are especially selected for hardiness and durability in the territory where this book is sent.

There are none of the undesirable varieties. When you order seeds from this book you can rely on getting only **dependable seeds** of merit.

For your further guidance and to make the results of your efforts more certain you will find cultural directions on most of the packets.

Flowers are usually known as **Annuals, Biennials** and **Perennials**.

Annuals bloom and ripen seed the first year and then perish.

Biennials do not generally bloom the first year and are in perfection the second year only.

Perennials flower several years in succession, many blooming the first year from seed sown early and are used for permanent plantings.

For price list Perennial seeds, see page 10.

Hardy Perennials and **Biennials** may be sown either in early fall or spring and require no protection through the winter. **Hardy Annuals** may be sown either in late fall or spring. They often self-sow in the fall.

Half-Hardy Annuals, Biennials and **Perennials** cannot be sown in open ground until warm weather; they may, if desired, be started early inside and transplanted afterwards. The latter two need protection in winter or may be carried through in cold frames or greenhouses.

Pansies Favorites with all. For best results you must start with a good strain. The finest Pansies are, as a rule, shy seeders, which accounts for the difference in the price of the various mixtures offered.

Spring Planting. Seed should be sown in hotbeds or boxes, then transplanted to open ground after freezing is over. It is a mistake to plant Pansies in the shade of a tree or building. During dry weather the bed should be watered daily, and in extreme cases twice a day for the best results. Cultural leaflet free upon request.

Fall Planting. Many gardeners prefer August sowing in hotbeds, covering well with straw, mulching with manure when winter sets in. Gradually uncovering on warm days in early spring. These will produce the early April blossoms. Pansies are successfully grown from seed even by the novice; however, we recommend our full-blooming plants. Ready in April.

Petunias A garden without these favorites could hardly be called complete; there are few which equal them for effect. They commence blooming in July if sown outside in May, and continue to flower in great masses until destroyed by frost. Their culture is the most simple; any soil seems to suit them, while, of course, a good rich earth adds greatly to the richness of color. The various strains which we offer have been obtained from specialists, and we are confident that they will give satisfactory results. For early blooming sow early in the house and cultivate in small pots or flats till the weather has settled.

Early Flowering or Winter Flowering Orchid Long Season SPENCER SWEET PEAS

These are a distinct strain of Spencer type flowers that bloom fully three weeks earlier than other Spencers. The original purpose in breeding up these varieties was for winter blooms in greenhouses, which has made wonderful change in Sweet Pea culture indoors. It was soon discovered that these same varieties would do equally as well in our gardens by producing fine, large blossoms considerably in advance of other strains. We recommend them for garden culture as well as for florists indoors.

SPENCER CUPIDS for Beds and Rock Gardens

A recent production by breeding the Spencer into very dwarf growth, thus very suitable in beds and rock gardens. In fact very suitable where any low growing plants are wanted. Our mixture includes white, pink, blue and other shades, provided us by the grower where we saw them in bloom last summer. Do please try a few. **Liberal pkt. 10c; ¼ oz. 15c; oz. 50c.**

MIXED SPENCER SWEET PEAS—Silver Medal Strain

Too much cannot be said in praise of the merit of the mixture. We arranged with Mr. Waller, a very extensive seed grower in California, to supply us stock from his Silver Medal strain, which consists of many standard varieties of Spencers. To this we added some separate varieties that there may be a well-balanced assortment of colors. All these make it far superior to the so-called mixed which are grown-mixed and only a few colors prevail. Our mixture is a very distinct class.

Liberal packet 10c; oz. 15c; 2-oz. 25c; ¼-lb. pkg. 40c; ½-lb. pkg. 70c; lb. pkg. \$1.25. All postpaid.

CULTURE. The seed should be sown as soon as the ground can be worked, in trenches 8 to 10 inches deep in a position fully exposed to the sunlight and air on both sides of the row. Cover with about one inch of soil, pressing it down firmly. As the plants grow, draw the soil to the plants until the trench is full. This method will give a long vine in the soil, which will make innumerable roots and gather nourishment and moisture through a dry spell. As soon as they are above ground, thin out to 2 to 4 inches apart to enable the plants to fully develop if you desire large flowers. They should be staked up either with branches of brush or stout stakes on which wire netting has been fastened. These should be at least 4 feet high. During dry weather water thoroughly and frequently. The flowers should be cut as often as possible to prevent the plants from running to seed which stops them from continuing to bloom.

Perennial Plants Listed on Pages 11 to 17 Inclusive

We advise planting liberally of this class of flowers. They practically take care of themselves. All are hardy in Colorado except where so stated. A very few are Biennials—bloom in the second season and then die. Several tender Perennials that bloom the first year by starting indoors are listed with Annuals. Campanulas and Digitalis are in this list; however, they are classed as Biennials.

SEED NOTES. To get best results in germinating hard shell seeds such as Columbines, Delphiniums, Ipomoeas, Sweet Peas, and others, place the seed in ice temperature such as your refrigerator for a week to ten days, then plant them immediately. This method is recommended by some as better than soaking the seed in water.

HARDY PERENNIAL PHLOX

ALL POSTPAID....

Phlox Decussata. This class of Hardy Perennials is of special importance in every flower garden. Succeeds in almost any soil and blooms through a long season. This new list covers colors which are sure to please.

Plants from seed do not come true to color. You should depend on these root divisions.

The best effects to be had with Phlox are produced by planting masses of each color, not less than six and even as many as two dozen or more plants together. For example, a border of Phlox may be planted, beginning with palest pink and shading up to dark cherry, then pure white, and white with a red eye, and more white, then a quantity of red and again white at the end. If in another border the shades of purple are planted with occasional bunches of white, the Phlox will be the pride of the garden. Our roots are large, 2 years old, field-grown. Figures at end of description indicate height in inches.

Price: 20c each; 3 for 55c; 12 for \$2.00; except when priced otherwise. All postpaid.

HARDY WATER LILIES

ALL POSTPAID.....

EVERY YARD CAN MAINTAIN A WATER-LILY POOL.
PLANT YOURS THIS SPRING.

These Water Lilies are perfectly hardy anywhere in the United States, growing wild as far north as Canada. They commence flowering early in the spring and remain in flower until late summer. The flowers mostly float on the water and are in shades of Pink, Yellow, and White.

AN INEXPENSIVE WATER GARDEN

You can enjoy a water garden without the permanent investment of a concrete pool. Discarded water tanks, sawed off to the proper depth; old vats, tubs, bathtubs, barrels, trays, and other containers may be had for very nearly the hauling away. A large size galvanized washtub does very well. Visit the yards of a wrecking company. Patch leaks with hot asphaltum, which can be secured from any roofing company, applying when container is thoroughly dry.

Sink about 2 feet in the ground, in a sunny spot, filling one-third full of soil; plant, allowing one Lily for ordinary tub, other containers in proportion. Cover soil, which should be good garden loam, with sand or small pebbles to help keep the water clean. Pools 2 feet deep are standard, which allows for at least a foot or more of water over the plants. It is well to remember that the roots spread out laterally, not growing down very deep. Keep the water level fairly constant and the pool clean. Do not drain very often, but allow hose to flow in and overflow for an hour or so if pool becomes murky.

In May and June we can supply direct from a western grower, assuring you fine clumps of white, pink and yellow-flowered varieties.

STANDARD PEONIES

ALL POSTPAID

The Peony ranks among the most popular flowers. The blooms come out very early and are seldom attacked by disease. Our roots are extra large. The most popular perennial for our home flower garden. Being perfectly hardy, one planting will do for a lifetime with suitable cultivation. Is strictly hardy and does well in most any location; however, responds readily to good rich, deep soil in an open, sunny position. Be careful not to plant too deep; the best is for crown to be about 2 inches below the surface. Peonies seldom bloom the first season. Ground should be spaded deep and well enriched, as suggested in our free leaflet.

Don't worry about the black ants that often gather on the buds, they are seeking the honey which exudes from the bud, and do no harm. If the stalk wilts, remove it to check the fungus from spreading.

Our Special Cultural Leaflet, "Peony Pointers," free with orders if asked for.

BOOK, Peony Manual, by Harrison, illustrated. Contains good suggestions. **25c, postpaid.** Our list contains varieties all distinct, suitable for Colorado culture.

To Keep Dahlias as Cut Flowers

Cut the flowers late in evening or early in the morning, not during the heat of the day. Freshly cut flowers will keep considerably longer, and wilted flowers, if not in too serious condition, will be entirely restored in appearance if the following suggestions are followed: Cut blossoms in early part of the day whenever possible. Fill receptacle with water, as hot as can be borne by one's hand. Plunge the stems, but not the foliage, almost their entire length into the water; let them remain in the water until it cools, then transfer into cold water as in usual manner, with the addition of a quarter teaspoonful of salt to a quart of water. If the stems are particularly hard and wiry, water near boiling point may be used to good advantage.

ABOUT GUARANTEE AND REPLACEMENT

While we cannot guarantee every plant or root to live, we do guarantee that each is in good condition when packed and shipped. Part of this risk is yours in giving proper care and culture. If ever there is a fault you think is ours, write us frankly; we will do our part. We must have our customers satisfied.

So much depends on the care in protecting the roots from exposure, delay in planting, careless planting, unfavorable weather conditions, that consideration on purchaser's part will show that to replace all losses is injustice to us. Thus when there is an actual loss we replace at **Half Price.** Cultural leaflet free upon request.

STRAWBERRIES Fall Bearing

We pay postage on Strawberry Plants and Small Fruit at these prices.

Buy one-year-old plants and get them into the ground as soon as you can. Before planting, dip the roots in water. Set the plant with the crown or bud at the surface of the ground. April and early May is the best time to set the plants. If late May or June, the leaves should be trimmed. We do not recommend fall planting.

Everbearing varieties are now the leading kinds—in fact, so much can be said in favor of varieties that produce all through the summer and fall that we are discarding so-called Standard or June varieties and offer Everbearing varieties only.

For best results with Strawberries, give all-day sunshine and apply nitrate of soda or fine bone-meal fertilizer in June. Strawberry plants are packed 25 in a bundle.

Progressive.

Mastodon The best Everbearing known. The giant of all Everbearings. Produces heavily in July, then renews its productiveness in August and continues until freezing-up time. In late October last season we enjoyed boxes of these large delicious berries. The berries are very large, firm and uniformly well colored. Tests have been made where 18 berries filled a quart box. Three berries weighed 2 ounces. They have a very fragrant aroma. This is the coming strawberry. **25 plants for 75c; 100 plants for \$1.75; 1,000 plants for \$12.50, all postpaid.**

Progressive This variety has been in cultivation in Colorado for several seasons. Is not a large berry but produces continuously until killed by hard freezing. A very profitable market variety. **25 for 50c; 100 for \$1.25; 1,000 for \$10.00, postpaid.**

SMALL FRUITS THESE PRICES ARE ALL POSTPAID

These varieties are all of established merit and very suitable for our Western planters. Our stock is all examined by State Inspectors.

We do not claim to grow this stock. We do, however, claim to have it grown for us by very responsible established nurserymen who are honest in giving us the best they can produce.

Let us book your orders early and ship the stock as wanted. No extra charge for packing.

They come up in from 8 to 10 days, and the plants mature in from 6 to 9 weeks. Thorough tilling is essential; the ground must be kept soft. Avoid handling or touching the vines in damp weather.

BEETS *Fine Table Varieties*

Two ounces for 100 feet of drill.

The rows in which Beets are planted should be a foot apart. Along each row, in a furrow or small trench 1 inch deep, drop the seeds 1 or 2 inches apart; then cover with fine soil, pressing down firm. Beets should be planted some time between the first of April and the first of June; they will be from a week to a month coming up, according to the weather. When the plants are about 4 inches high, thin out to from 3 to 4 inches apart. The plants pulled up can be planted elsewhere. Strip their outside leaves off, and put the plant in holes deep enough to keep the roots from turning up. Beets should be ready for eating in from 8 to 12 weeks. Keep the ground loose and well tilled.

Detroit Dark Red "Dependable Grade." We believe this is the best beet for the market and home garden and on account of its uniform deep rich color the most desirable for canning. Roots are medium size, nearly round, very smooth and of dark blood-red color. Very crisp, tender and sweet, remaining so a long time. **Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 85c.**

CABBAGE

Three ounces seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and 2 feet apart between rows. Late Cabbage 2 feet apart in rows and 3 feet apart between rows. Cultural leaflet on request.

If Cabbage seed is treated with **SEMESAN** it will help lessen the root rot.

Eat CARROTS for Health

Two ounces for 100 feet of drill.

Furrows for Carrots should be 14 inches apart and from a half-inch to an inch deep. The seed can be sown from mid-April to mid-May; it should be sown rather close, as Carrots do not germinate very well. Thin the plants out to 4 inches apart when they are 4 inches high. Soil for Carrots should be particularly well tilled before they are planted.

CAULIFLOWER

One ounce will sow a bed 40 square feet and produce about 2,000 plants.

All our Danish seed is growers' first quality sifted seed, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Cultural leaflet on request.

Early Danish Perfection Snowball "Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. Pkt. 15c; ¼ oz. 75c; oz. \$2.00; ¼ lb. \$7.00.

Late Snowball or **Dry Weather.** Danish grown sifted seed. Pkt. 15c; ¼ oz. 75c; oz. \$2.00; ¼ lb. \$7.00.

CELERY

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about 4 inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Celery is planted in rows that should be at least 3 feet apart. About 30,000 plants to the acre. Cultural leaflet on request.

SEMESAN will help to increase your celery crop.

Golden Self-Blanching "Dependable Grade." French-grown seed. The choicest sort of delicious Celery; produces large bunches with broad, heavy stalks which blanch into a rich, appetizing golden yellow, making this the most popular golden Celery on the market. Pkt. 10c; ¼ oz. 25c; oz. 75c; ¼ lb. \$2.25.

GIANT PASCAL. Standard market sort for winter use. Pkt. 5c; ¼ oz. 10c; oz. 30c; ¼ lb. 90c.

GEORGIA, or SOUTHERN. The standard variety for greens. Pkt. 5c; oz. 10c; ¼ lb. 35c.

CORN SALAD

Used for greens, like Spinach, or as a salad. Very hardy, thus can be sown in fall or spring. Pkt. 5c; oz. 15c; ¼ lb. 45c.

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

SEMESAN TREATMENT on your Sweet Corn Seed will increase germination. Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be 3 feet apart, the kernels sown three together every 6 inches in the furrow. When the Corn is well started, pull out all but 1 stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump. Do not molest the ears of growing corn; it is liable to spoil them.

Prices for all varieties: Pkt. 5c; ¼ lb. 10c; ½ lb. 15c; lb. 25c; 2-lb. pkg. 45c.

Golden Bantam "Dependable Grade." Select strain of exquisite quality; when ready to use is of a bright golden yellow color. It can be planted very early, is hardy. The small stalks can grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring.

Golden Giant or **LARGE BANTAM.** A little later than Golden Bantam, yet earlier than Stowell's Evergreen. Produces large ears, with deep, tender kernels. A happy combination of quality and size that pleases.

EARLY MAYFLOWER. Unquestionably the earliest white kernel variety in existence. Ears are 8- and 10-rowed, 5 to 6 inches long, average 2 ears on a stalk, growing only 4 to 5 feet high.

Country Gentleman Shoe-peg kernels. Medium large, early canning variety. Sweetest of all.

STOWELL'S EVERGREEN. Large, late, sweet, popular home garden sort. Very heavy producer.

Scatter at least 10 seeds in it, well apart, and cover them with half an inch of fine soil, pressing it down. From the middle to the last of May is planting time. Thin out to 3 plants to a hill. Our seed is all Colorado-grown. Use **SEMESAN POWDER** on your Cucumber Seed to increase germination and prevent leaf blight. "**HOTKAPS**" are excellent protectors from late frosts. Have them ready for your cucumbers.

Clark's Special Deep Green "Dependable Grade." This strain is the result of years of selection. Averages 8 to 10 inches long, which is a good marketable size. Being very dark green-skinned, and white inside, with uniform shape, it is very popular. It is similar to Woodruff's Hybrid. We heartily recommend it. **Pkt. 5c; oz. 20c; ¼ lb. 60c.**

LETTUCE All Select

One ounce for 200 feet of row. One ounce of Head Variety will plant 400 feet of row.

Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin to 4 or 5 inches. The heads are usually well formed in 10 weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy. A special cultural leaflet on **Lettuce Growing in Colorado** free upon request.

*These varieties form heads.

MUSKMELON OR CANTALOUPE

One ounce for 50 hills, 3 pounds per acre.

Muskmelon planting and cultivation throughout are the same as those used in raising Cucumbers. Is considered rather delicate for northern latitudes, but with care can be successfully grown. Our Melon Seeds are all taken from carefully selected specimens.

TOMATOES *Delicious*

One ounce will produce 1,500 plants; ¼ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a 3-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within 3 feet of any other crop. Dig holes 3 feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the stem of the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing the earth around it; if the earth is dry, water it as soon as the plants are set. Some people put a ring of heavy paper around the plant, at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent wilt.

The Pritchard (Scarlet Topper). The latest wilt-resisting variety being developed by Prof. Pritchard of Washington, thus named in his honor. Medium early, smooth and solid, of scarlet color. Sets heavily, thus produces well. **Pkt. 10c; oz. 50c.**

Marglobe A new variety brought to popularity by seed distributed from Washington. Is bright red and very round. Slightly later than Earliana but larger. The bearing season is long, thus especially suitable for home garden. Much liked by canners. In New Jersey they claim nothing better in tomatoes. A truly wilt-resistant variety. **Pkt. 5c; oz. 40c; ¼ lb. \$1.25.**

THE BURBANK TOMATO. Burbank's own production, famed for uniform size, solidity and productiveness; a very beautiful red variety for either home or market garden. Believed to be earliest of all tomatoes. **Pkt. 5c; oz. 50c; ¼ lb. \$1.50.**

GLOBE. This variety continues to be the best for indoor forcing, being round, smooth and a desirable red color. **Pkt. 5c; oz. 40c; ¼ lb. \$1.25.**

John Baer "Dependable Grade." Of all tomatoes this is the handsomest yet introduced. It is an early variety of bright scarlet color, good size and smooth, ripening close to the stem. It is a wonderful cropper. The seed we offer was grown from the introducer's stock. If you want a tomato that will give entire satisfaction in every respect, give this a trial. You will order more next year. **Pkt. 5c; oz. 35c; ¼ lb. \$1.00.**

Featuring
**Golden Gleam
Nasturtiums**

This New Double Sweet-Scented Nasturtium is the outstanding novelty for 1933. Introduced only last year, the demand was so great that the limited stock of seed was soon exhausted by early orders. For 1933 we have contracted from the introducer for sufficient stock to fill EVERY order.

Years of effort by the Bodger Seed Farms in California have produced this most fascinating golden color, double blossom Nasturtium, growth averaging 18 inches high outdoors, and 3 to 4 feet in greenhouse. Blossoms are 2 to 3 inches in diameter and begin to appear when plant is very young, coming out well above the foliage. The fragrance is very pronounced.

Special Offer

In order that all may have a planting of this New Golden Gleam Nasturtium, and enjoy the distinction of having such a novelty in your garden, we are offering regular sized packets, liberal in count, with colored illustration, each packet **15c**
1 oz. for 75c.

Featuring a Gorgeous and Magnificent Strain of
Colorado Mammoth Blue Morning Glory

The answer to many years of labor to perfect this exquisite strain. Enormous flowers, blooms averaging four inches across. The color is a fixed sky-blue, most unusual and attractive, and the abundance of blooms, open from sunrise till afternoon, is most beautiful. It will grow upwards of 15 feet in a single season and is most effective for backgrounds. Puncturing seed with a needle helps seed to germinate more readily. **Packets, each, 15c; ¼ oz. for 35c.**
